

CONTENTS

Scoring Tech Talent is a comprehensive analysis of labor market conditions, cost and quality in the U.S. and Canada for highly skilled tech workers. The top-50 markets were ranked according to their competitive advantages and appeal to tech employers and tech talent. The analysis also provides insight into the quality of tech talent, their demographics and how tech talent growth patterns are impacting cities and real estate markets.

06 WHAT IS **TECH TALENT?**

Tech talent is a group of highly skilled workers in more than 20 technology-oriented occupations driving innovation across all industry sectors.

WHICH ARE THE TOP-RANKED TECH TALENT MARKETS? 11

A scorecard measuring 13 metrics to gauge the competitive advantages of markets and their ability to attract and grow tech talent pools determined the top-ranked tech talent markets.

WHAT ARE TECH TALENT MOMENTUM MARKETS? 14

Tech talent growth rates are the best and most easily quantified indicator of labor pool momentum and patterns across both large and small markets.

WHAT DEFINES A TECH TALENT MARKET? 18

Tech talent markets are characterized by high concentrations of college-educated workers, major universities producing tech graduates and large millennial populations.

WHICH ARE THE HIGHEST- AND LOWEST-COST MARKETS 26 TO OPERATE IN?

Employee wages and office rent for a typical 500-person tech firm using 75,000 sq. ft. of office space provide insight into annual operating costs, market-by-market.

HOW IS TECH TALENT QUALITY VS COST MEASURED? 30

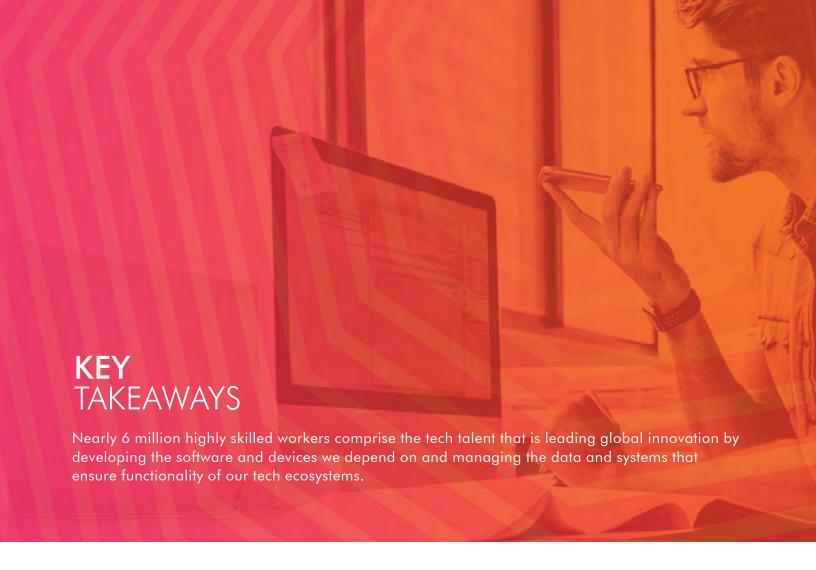

Plotting a quality assessment against average software developer salary by market visualizes the distribution of quality and cost across the top-50 tech talent markets.

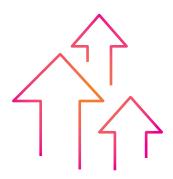

35 HOW DOES TECH TALENT IMPACT COMMERCIAL REAL ESTATE?

Markets with high concentrations or clusters of rapidly growing tech talent employers have driven office leasing demand, causing rising rents and declining vacancies.

39 **APPFNDIX**

Local market profiles and full report data summary.

MOMENTUM

Tech talent job growth has accelerated in 23 of 50 markets, with notable surges in: Ottawa, Los Angeles & Madison.

QUALITY

Quality tech talent is becoming costlier.

Highest Quality and Cost: The San Francisco Bay Area & Seattle.

Best Value: Canada & the Midwest.

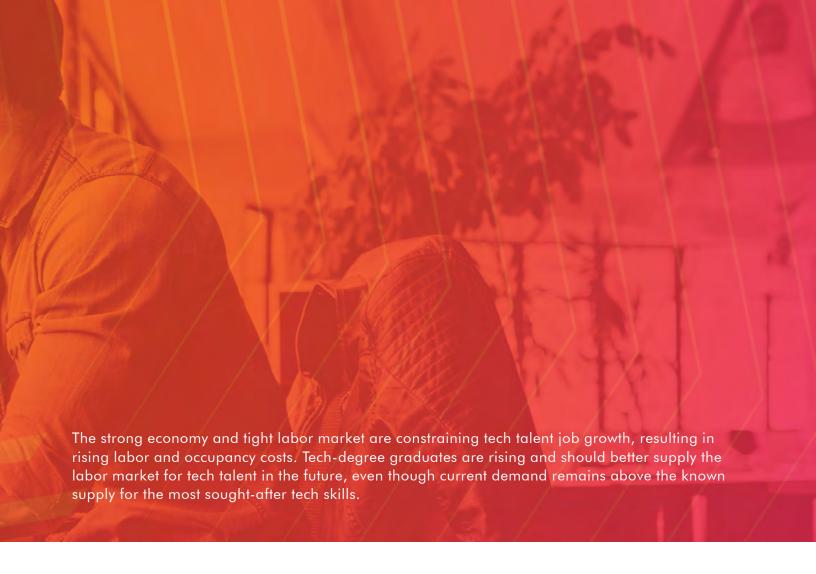

#SCORE

Thirteen metrics measured each market's depth, vitality and attractiveness.

Top-Ranked Markets: San Francisco Bay Area, Seattle & Washington, D.C.

Markets Rising in Rank: Cleveland, Columbus & San Diego.

BRAIN GAIN

The number of tech degree graduates were compared with tech talent job creation in each market to determine brain gains or brain drains.

Drain: Boston & Washington, D.C.

Gain: Toronto, the San Francisco Bay Area & Charlotte.

\$COST

The typical 500-person tech company needing 75,000 sq. ft. of office space can expect a total annual cost to range from \$27 million in Montreal to \$59 million in the San Francisco Bay Area.

WHAT IS TECH TALENT?

Technology is integrated into nearly everything we do, highlighting the growing scope of devices and software that form the Internet of Thinas. Highly skilled tech talent workers create and enable this evolving culture between work and home. Computers in the home and workplace are commonplace, but new tools (i.e., wearable technology, Wi-Fi-enabled devices and sensors, and voice-activated home assistants) are becoming more universally adopted, and expectations for fast deliveries and real-time information updates are increasing. Technology is the future and companies across all industries are expanding their innovation capabilities to satisfy changing consumer demands.

Nearly 6 million highly skilled tech talent workers are leading global innovation that will shape our daily lives and economy for decades to come. These tech talent workers comprise 20 different occupations—from software developers who enable the devices we depend on, to systems and data managers who ensure that our tech ecosystems function. These positions are highly concentrated within the high-tech services industry but are spread across all industry sectors (Figure 1). Using this definition, a software developer who works for a logistics or financial services company is included in our data.

The 5 million tech talent workers in the U.S. and 834,000 in Canada account for 3.5% and 5.3% of total workers in each country, respectively. This relatively small labor force has an outsized impact on real estate markets and the economy. The number of tech talent workers has increased by 16% in the past five years, adding 682,000 jobs to the U.S. economy at a pace more than three times the national average. They are fueling new innovation and adapting technology within nontraditional tech sectors to increase productivity and strenathen the national economy.

¹Tech Talent includes the following occupation categories: software developers and programmers; computer support, database and systems; technology and engineering related; and computer and information system managers.

WHICH ARE THE TOP-RANKED TECH TALENT MARKETS?

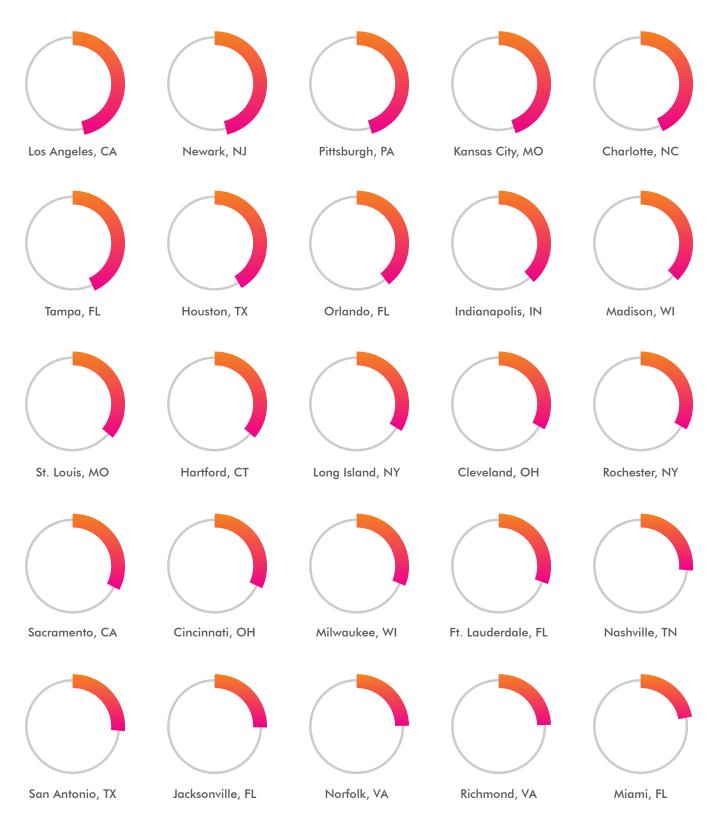

The highly competitive and supply-constrained market for tech talent, along with advanced communications infrastructure, has accelerated the expansion of tech talent pools beyond major hubs and into smaller markets. These previously undersupplied regions are gaining demand for tech talent from start-ups and established companies. Accordingly, demand for commercial real estate to accommodate this growing workforce is on the rise.

Fifty of the largest markets by number of tech talent professionals in the U.S. and Canada were analyzed to create a scorecard that ranks them (Figure 2). The scorecard uses 13 metrics to measure each market's depth, vitality and attractiveness to companies seeking tech talent and to tech workers seeking employment. Each metric was weighted by its relative importance to job creation and innovation. Tech talent concentration metrics have the highest weights because they signify clustering of tech workers. Labor costs for tech talent are weighted more heavily than office rents because companies allocate more capital to labor than to real estate.

The top-three markets are the San Francisco Bay Area, Seattle and Washington, D.C. Comparing the 2018 market rankings with the previous year, a few markets shifted positions. While the San Francisco Bay Area and Seattle maintained the top-two scores, Washington, D.C. moved up one spot to third and Toronto moved up two spots to fourth. Supported by strong tech-centric universities, Boston and Pittsburgh (the No. 3-ranked small market) each rose two spots to 7th and 28th, respectively.

FIGURE 2 TECH TALENT SCORECARD RANKING

WHAT ARE TECH TALENT MOMENTUM MARKETS?

As companies expand their technology capabilities, demand for tech talent is growing in both large and small markets across all industries. Major gateway markets such as New York, Toronto and the San Francisco Bay Area dominate overall tech talent growth because of their size. These markets, along with others with a tech talent labor pool of more than 50,000 workers, are categorized as "large," while those below this threshold are categorized as "small." Charlotte moved up into the large-market bracket, as did the Canadian markets of Montreal and Ottawa. Both large and small markets have their advantages: While large markets tend to have a deeper pool of talent, small markets typically offer business and cost-of-living savings.

Tech labor concentration—the percentage of total employment—is an influential factor in how "tech" the market is and its growth potential. Tech talent comprises 11.2% of total employment in Ottawa and 9.8% in the San Francisco Bay Area—the highest concentrations of the top-50 markets and more than three times the national average of tech talent density. Toronto, Seattle and Washington, D.C. round out the top-five most concentrated tech markets, ranging from 8.0% to 8.9% of their total employment. This sizeable concentration of highly skilled workers offers an environment conducive to innovation.

To evaluate up-and-coming markets and determine their growth momentum, we considered "large" and "small" categories separately. Except for Washington, D.C., which has remained about the same size, the five fastest-growing large markets increased their tech labor pools by between 15% and 50% over the past five years (Figure 3). Smaller tech talent markets also grew quickly. The top-10 small tech markets increased by more than 10%. Charlotte grew at the fastest pace of all 50 markets, increasing by 59%.

Tech talent job momentum has increased in 23 of the 50 markets over the past two years (2016 and 2017), compared to the previous two-year period. The top-seven markets for tech talent job momentum grew at least 10% faster during the recent two-year period (Figure 4). Tech talent job growth has a multiplier effect that positively impacts economic growth, which in turn can have an immense impact on commercial real estate.

FIGURE 3
TECH TALENT LABOR POOLS (2017)

Large Tech Talent Markets (>50,000 Labor Pools)

| Market | Tech Talent Total | % Change (2012-2017) | By Volume (2012-2017) | Concentration (2017) |

WHAT DEFINES A TECH TALENT MARKET?

A key aspect that top tech talent markets share is high educational attainment. Two-thirds of the top-50 tech talent markets have a city-level educational attainment rate above the U.S. average (31.3%). In Seattle, Madison and Washington, D.C., 55% or more of residents over 25 years old hold a bachelor's degree or higher (Figure 5). In Atlanta, Denver, Portland, Raleigh-Durham and Austin, the educational attainment rate is above 49%.

Education, particularly with a focus on technology,² is best analyzed through degrees completed and issued from higher educational institutions. Metro areas that produced the largest number of tech graduates using the latest data available were New York, Washington, D.C., Los Angeles, Boston and the San Francisco Bay Area (Figure 6). Large tech talent markets dominate the top-10 degree-granting regions, with the smaller markets of Detroit, Phoenix and Philadelphia just missing the list. Demand is high for tech-related classes and degrees, and tech-related degree completions have grown by an average of 43% across all markets since 2012. These numbers provide insight into which markets will produce the highest amount of tech talent entering the labor pool each year.

Graduates do not always remain in the labor market where they earn their degrees; they often migrate to locations that offer the best pay or have the most job opportunities. Analyzing tech-related graduation data and tech-related employment growth, Figure 7 presents the difference between where tech talent workers are employed and where they were educated. Tech degrees cover the most recent five-year period available (2012-2016) and tech talent jobs added cover the period when most graduates would be counted in employment figures (2013-2017). The San Francisco Bay Area stands out as a strong tech talent job creator, adding nearly 46,500 more tech talent jobs than graduates. On the other end of the spectrum, Washington, D.C., Boston and Los Angeles produce the most tech graduates, but post a deep deficit in employing them locally.

Reflected in the brain gain/drain calculation, the increase in tech-degree graduates is beginning to better supply the labor market for tech talent. This year, fewer markets posted a brain gain, but there still is a high level of demand and inadequate supply for the most sought-after tech skills.

*Tech degrees cover the most recent five-year period available (2011-2016) and tech jobs added cover the time period reflecting when most graduates would be counted in employment figures (2012-2017).

Another notable characteristic of tech talent markets is the presence and growth of millennials³ in the workforce. The younger part of this generation has matured with the internet-connected world and continues to advocate for an integrated and efficient working environment. Generally, this well-educated cohort prefers city living. This has revitalized many downtown neighborhoods and provided a distinct geography to measure the trend—cities.

As the largest demographic cohort, millennials' robust entry into and maturity within the labor pool contributes greatly to the growth of tech talent across all 50 markets (Figure 8). Five large tech markets have increased their millennial populations by more than 9% since 2011. Seattle grew the fastest at 22.7%. During the same period, four of the smaller tech markets increased their millennial populations by more than 9%, with San Antonio and Madison growing faster than the rest. Aided by the presence of higher educational institutions, Madison, Pittsburgh, Norfolk and Boston rank highest for concentration of millennials as a portion of the urban population, accounting for 24% or more (Figure 9).

³Analysis conducted in this report includes millennials aged 20-29 years.

Similar traits among markets cause many of them to appear equivalent, but top tech markets distinguish themselves from the rest with tech clusters and higher concentrations of tech talent. These clusters typically form around preeminent universities that tend to invest the most in innovation and provide a constant flow of new talent for local companies. Stanford University is an essential catalyst for tech clustering in the San Francisco Bay Area, as is Georgia Institute of Technology in Atlanta and the Massachusetts Institute of Technology in Boston. Tech clusters can also form around leading companies that draw other, smaller companies to a region, in turn supporting entrepreneurs as they develop their innovations. Examples can be found in Seattle with large tech companies and in Charlotte with large financial services companies. Tech companies use these clusters to collaborate and compete with one another, thereby accelerating the innovation process. These companies in the core high-tech industry are heavily concentrated, with about half of their workers doing techrelated jobs (Figure 10). Consequently, tech clusters are likely to form in markets with a strong concentration of high-tech companies.

TECH TALENT LABOR CONCENTRATION BY INDUSTRY (2017)

Tech Talent occupations as a % of all occupations in each industry

Source: U.S. Bureau of Labor Statistics (National), April 2018.
*Includes computer software and services and computer product manufacturing.

WHICH ARE THE HIGHEST AND LOWEST COST MARKETS TO OPERATE IN?

The greatest cost for companies within tech talent markets is employee wages. These highly skilled and educated workers command a premium that can reach more than double the average non-tech salary. The San Francisco Bay Area ranked the highest for average tech talent worker salary at more than \$125,000 per year, more than \$8,000 above the next highest market (Seattle). The average tech worker wage in 19 of the 50 top tech talent markets was above the U.S. tech talent worker average.

The second-highest cost for most companies is office rent. Companies continue to pursue the benefits of tech clustering and often place a higher value on specific submarkets and even specific streets where tech talent is ample. This has led to some competition for office space and caused rental rates in these areas to increase. Average office rents are the highest in Manhattan, followed by the San Francisco Bay Area and Washington, D.C. Among the top-10 most expensive office markets, Miami and Ft. Lauderdale are the only small tech markets with an average asking rate above \$30 per sq. ft.

Combining wage and real estate costs provides insight into what a tech company might pay to operate in one or more of the top-50 tech talent markets. For this comparison, U.S. occupational averages were analyzed to determine the makeup of a typical 500-person tech company needing 75,000 sq. ft. of office space. This breakdown provides interesting insight into relative costs, market-by-market (Figure 12).

Local market wages were applied to the various occupations to determine total annual wage costs by market, and local market rents were used to estimate the annual cost of renting a 75,000-sq.-ft. office to house 500 employees. The San Francisco Bay Area topped the list with the highest estimated annual cost at more than \$59.1 million, followed distantly by the other major tech markets of New York, Washington, D.C. and Seattle. These high-cost markets continue to attract employers seeking to push the boundaries of innovation, as well as the tech talent that makes it possible.

Source: U.S. Bureau of Labor Statistics (National), April 2018.
*Tech Talent includes the following occupation categories: software developers and programmers; computer support, database and systems; technology and engineering related; and computer information system managers.

HOW IS TECH TALENT QUALITY VS COST MEASURED?

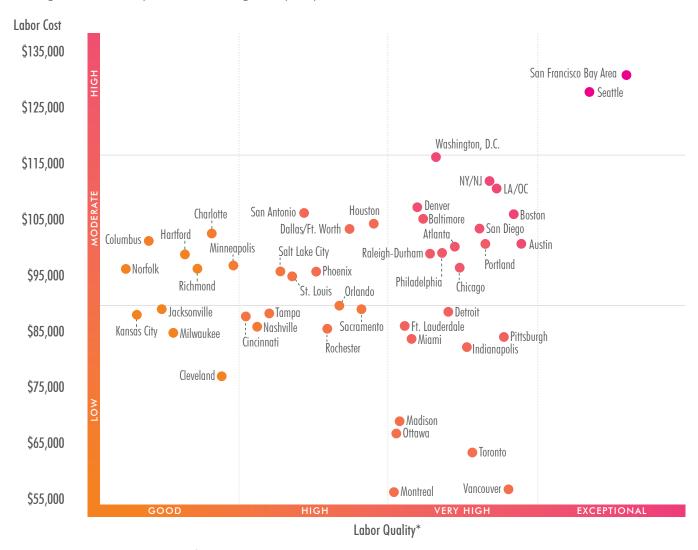

Assessing the quality of a labor market is challenging because there are no standard metrics to measure. Since the cost of talent is the largest expense category for most firms seeking tech talent, the quality of that tech talent is becoming one of their most important considerations. The skills of the available labor pool do not appear to align with available jobs, causing a structural barrier to growth for companies across North America and slowing job creation. Jobs that require specific skills, such as software development, remain in high demand, while the pool of available talent to fill them is limited. Only 37% of all tech talent workers are employed in the high-tech software/services industry (Figure 1), meaning tech companies must compete with other industries that employ the remaining 63% of tech workers. In addition, the unemployment rate for college-educated workers dipped to 1.8% in 2018, further stiffening competition.

Figure 13 plots a quality assessment for software developers against their average salary by market to visualize this trade-off across the top-50 tech talent markets. Labor quality was measured by the number and concentration of software engineers with three or more years of experience and who graduated from one of the top-25 computer science programs in North America and including the top-five in Canada, as determined by U.S. News & World Report. The highest cost markets (San Francisco Bay Area and Seattle) also have the highest concentration of quality tech talent. However, good, high and very high concentrations of quality tech talent are available in moderate and lowcost markets, providing a range of options. Due in part to the strong U.S. dollar, Toronto, Vancouver, Montreal and Ottawa provide the best value when it comes to cost and quality, followed by Indianapolis, Pittsburgh and Detroit.

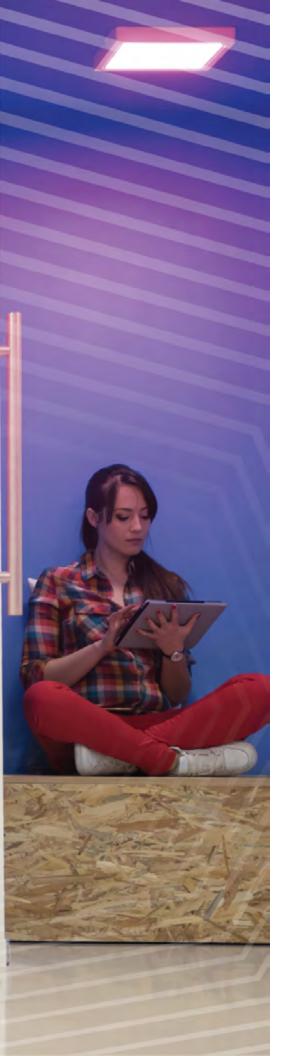

FIGURE 13 TECH TALENT QUALITY VS. COST ANALYSIS Average Annual Salary for Software Engineer (USD)

Source: U.S. Bureau of Labor Statistics, April 2018, Statistics Canada, April 2018, U.S. News & World Report, CBRE Labor Analytics, CBRE Research, 2018. *Concentration of software engineers/developers with 3+ years of experience that have earned degrees from the Top 25 Computer Information Science programs in North America and including the top-five in Canada as rated by U.S. News, 2018.

HOW DOES TECH TALENT IMPACT COMMERCIAL REAL ESTATE?

Tech talent growth, primarily within the high-tech industry, has added 682,000 employees in the past five years and been the top driver of office leasing activity in the U.S. during that time. The high-tech industry's share of major leasing activity⁴ nationwide increased to 20% in Q1 2018 from 11% in 2011 the largest single share of any industry. Many tech talent markets, especially those with high concentrations or clusters of tech companies, have seen rising rents and declining vacancies. Significant demand for office space in top markets that have added tens of thousands of workers during the past five years raised rents to their highest levels and pushed down vacancy rates to their lowest levels.

Rent growth is most prominent in the large tech markets, with office rents in the San Francisco Bay Area and Orange County 50% higher than they were five years ago. But the decrease in vacancy rates is present across both large and small tech markets. Vacancy rates in Madison, Vancouver and Charlotte are the lowest of the top-50 tech talent markets, and some larger markets like New York, Toronto and the San Francisco Bay Area are not far behind (Figure 14).

The in-migration of talent to these tech markets also has a sizeable impact on residential real estate. Although Manhattan remains the most-expensive market in which to rent an apartment, 33 of the top-50 tech talent markets have a cost of living above the U.S. national average, according to Moody's Analytics (Figure 15). Comparing the annual average apartment rent with the annual average tech-worker salary, tech salaries generally can cover the cost of living in even the most-expensive markets (Figure 16), based on the affordability standard of 30% of income to housing.

The extended structural shift of technological innovation on the economic cycle could cushion markets during a downturn. Considering the underlying fundamentals of these top tech talent markets, we conclude that both occupiers and investors can pursue profitable real estate strategies.
